Feedback:

1. The lab content was very clear. At the first, it was very difficult for me to catch up to the flow but once I have understood the concept it was very good and very productive for me to work. At the start, I felt it was length but after reading every line I taught everything is need and all things are important.
2. I don't suggest any improvements. For me, I am new to C# and some of the networking concepts but I felt I have implemented everything in a good way and correct way after understanding the concept.
